

# The extensible scientific 3D mesh visualization

SciviJS Live Demonstration

# Introduction

- SciviJS = 3D viz of mesh fields using local GPU
- Demonstration : <https://demo.logilab.fr/SciviJS/>
- Typical usage: Finite Element solver result viz
- Remote viz (VNC-like) vs. local viz  
(remote: big meshes, high latency; local: smaller meshes, low latency)

# Technology layers

- Browser (WEBGL) - Three.js
- Use of Threejs Node material that helps generate GLSL (GPU) code
- SciviJS lib (no GUI)
- SciviJS\_GUI (DOM widgets)
- SciviJS\_jupyter (use of scivis\_gui in the notebook)

# SciviJS structure

- Plug-in system
- DataBlock, PlugInBlock
- 7 built-in PlugInBlocks

# ScivijS extensibility

- Write your own plugin
- Registers
- Existing plugin example
